$NP_ReIS \rightarrow_{0.3} \text{Det N}$	$NP_ReIS: [0.3, 0.7]$
$NP_ReIS \rightarrow_{0.7} \text{Pron}$	

- ▶ Hierarchical Clustering assesses distributional similarity throughout a vector space.
 - ▶ Recursive, bottom-up algorithm that
 - ▶ begins with every vector in its own cluster and
 - ▶ merges the least distant clusters.
 - ▶ We use Manhattan Distance as distance metric:

$$\text{Manhattan}(p, q) = \sum_{i=0}^n |p_i - q_i|$$

Clustering: Hierarchical Clustering

- ▶ Basic idea: For each original category, compare the expansion vectors of all its contextualized categories.
 - ▶ Example grammar (mother-contextualized categories):

$NP_S \rightarrow_{0.2} \text{Det N}$	$NP_S: [0.2, 0.8]$
$NP_S \rightarrow_{0.8} \text{Pron}$	
$NP_VP \rightarrow_{0.8} \text{Det N}$	$NP_VP: [0.8, 0.2]$
$NP_VP \rightarrow_{0.2} \text{Pron}$	
$NP_ReIS \rightarrow_{0.3} \text{Det N}$	$NP_ReIS: [0.3, 0.7]$
$NP_ReIS \rightarrow_{0.7} \text{Pron}$	

- ▶ Hierarchical Clustering assesses distributional similarity throughout a vector space.
 - ▶ Recursive, bottom-up algorithm that
 - ▶ begins with every vector in its own cluster and
 - ▶ merges the least distant clusters.
 - ▶ We use Manhattan Distance as distance metric:
$$\text{Manhattan}(p, q) = \sum_{i=0}^n |p_i - q_i|$$
 - ▶ similar results with Jensen-Shannon Divergence
